A software engineer, eternal learner, timelessly curious. I love science, all of them, but particularly particle physics, astrophysics and everything related to how to use technology to improve people's health, quality of life and productivity.

I also love arts and artist from reinassance movement, DaVinci, Michellangelo, Rafael, of course Goya, Velazquez, El Greco, Tiziano, representatives of the impressionist movement, such as Van Gogh, Renoir, Monet, Degas. Of those who are alive I like Antonio Lopez very much.

I have dreams to fulfill, to be able to work one day at CERN in Geneva contributing in some particle physics experiment. Another dream is to be able to work at the ESA trying to find habitable exoplanets, to work helping to create

a system of recommendations so that medical specialists can quickly find a

diagnosis to diseases and finally I would like one day to create a foundation to help train the new generation of engineers from their earliest childhood, learning to design hardware and software while they play. management expertise. Effective at providing innovative solutions for issues to ensure delivery of optimal products. Seeking a role in the IT industry executing

Performance driven Customer-focused Creative Gifted Productive

Experienced Facility Technician with proven ability to work independently and maintain high levels of productivity.

Disciplined Reliable Focused Meticulous

### microservices architecture to be able to perform Extract Transform and load data from differents sources using json, csv, txt files and external normalized databases. These data are used by a referral system so that college students

Software architect/Data Engineer, Stratio, Madrid

## The idea is to design a scalable distributed architecture of data consumption following the CQRS pattern, Command Query Responsibility Segregation, so

microservices dockerized and managed with Mesos following the Orchestrator microservices together with a series of steps based on classification algorithms I was in charge of designing and implementing the distributed architecture and

Feign, docker, mesos, kafka, and a distributed postgresql port develop by Stratio. Reasearch and development, Stratio, Badajoz Jul 2019 - Jan 2020 in my spare time or while we were waiting for another provider to finish their part while we developed for NCOI working for Stratio, i developed some open source projects.

persistence engine, written in scala and published in GitHub. I started a time

https://github.com/alonsoir/demo-dl4j I have also been researching the use of api deeplearning4j for facial recognition. https://github.com/alonsoir/demoFaceRecognition

https://github.com/alonsoir/demo-quartz Also I have been working during the end of the year on a project to try to find out the numbers of the euromillions and the primitive, with little success but very useful because it has allowed me to practice with the functional style of

I have participated in the review of a book on Kafka-Streams of the Pack

the api stream that appeared with the jdk8.

Publishing house, both the text and the code.

Https://github.com/alonsoir/KafkaStreaming.

Big Data engineer, Keedio, Madrid Nov 2016 - May 2017 I have participated in the development and integration of a lambda architecture created for Banco Santander in order to apply a solution imposed by the central banks to these systemic banks too big to fall, Basilea 4.

My concrete participation in this project was to create a utility to create files parquets, validation, correction in case of error, parts of the api, as a set of works spark to validate quantitatively and qualitatively the architecture delivered, In other words, a method to check that the software is correct, doing the calculations correctly, applying mechanisms designed by the bank, using scala.

I develop too the part of api responsible for making necessary currency

Finally I was also in charge of integrating the software in the place of exploitation chosen by the Bank. Big Data Engineer, Myself/Training, Badajoz Feb 2016 - Nov 2016 I have been studying and doing various training courses, like learning scala more seriously with BigDataUniversity, machine learning with Professor Andrew Ng and Apache Spark and hadoop architectures using a formacionhadoop com course. As a result of that training I have written a couple of projects hosted on

both projects are developed using the Scala language. https://github.com/alonsoir/hello-kafka-twitter-scala https://github.com/alonsoir/cassandra-spark-twitter-scala-app https://github.com/alonsoir/awesome-recommendation-engine

github to treat tweets in near real time using apache kafka, apache spark and some nosql databases like mongodb and Cassandra and another project about how to implement machine learning algorithms (ALS) for a recommendation engine. This project uses Apache hadoop and Apache Kafka and apache Spark,

I have participated in the initial proposal for Santander and OpenBank developing a book for them, and another proposal for a local newspaper, La Vanguardia, as well as maintaining the training cluster we have in the company. The cluster is handled with Cloudera Manager. I am learning scala and big data

programming skills with BigDataUniversity.com in my free time.

Big Data Engineer, Myself/Training, Badajoz

project is to save different events provided by a user.

kafka, apache flume, mongodb.

implemented with spring MVC.

Partner and CTO, Jorge Calvo Law office, Badajoz

Jan 2014 - Jul 2014

Big Data Engineer, Tektronix, Madrid Sep 2014 - Jun 2015 A BigData project related to the field of telecommunications. The final goal of the project is to show on a map the incidents in real time based on telecommunications optical fiber of a big city. I design a tool similar to Flume for doing ETL tasks from different locations and source files, a tool similar to SQOOP for doing ETL from different SQL engines, and a tool designed to manage the orderly and coordinated invocation of the different components of the architecture, in which there are phases in which Apache Spark is used to calculate the noise in each of the layers of the tree.

# I made another project, with mongodb, spring mvc, rabbitmq broker message with stomp support and a bit of html5, jquery and css3. The purpose of this

I did some courses from BigDataUniversity.com. Software Engineer, Naevatec/Kurento, Madrid Aug 2013 - Jan 2014 I developed the core of a set of restfull web services for a whatsapp type service, also i had to develop a couple of Controllers using iOS and XCODE. The technology was a mix of j2ee 1.7, spring\*, hibernate and bouncy castle for the java core and objetive C and Xcode for the iOS app. The core is an

implementation of the command pattern over a set of RESTFUL web services

The service is deployed and ready to use for the Hospital Niño Jesus from

I started my own tech blog, aironman2k.wordpress.com and i started to learn Apache Spark, with cloudera, how to use it with other technologies like apache

I developed a project for industrialize the process of creating demand on payment arrears with delinquent tenants of a neighboring community or rural. I used openxava framework. CEO/CTO, Smartbuyer, Badajoz

as a mechanism for exchange of information, HashMaps competing for a cache in which to save the customer information, items to sale and the accounting entries from the sale of items, - a thread engine to launch the consultation request and / or updates on the map, hibernate as a persistence and MYSQL as an engine for data persistence. I have pending to upgrade the system with a NON SQL connector like spring-data project.

I implemented operational functionality, such as Research Records, Dispatch

The technology used is Spring MVC, ajax, hibernate, Rational, Websphere 7, jquery, prototype, WAS7, jdk1.6, Clear CaseNovember 2010 March 2011The client was the Ministry of Justice, Government of Spain and the task was to

Software engineer, ATSistemas/Ocaso insurance, Madrid

system crash. This feature does not have the community version and asked me to devise a solution that would allow. The solution was a mixture of bash shell scripts, Cron and modification from sources project from Alfresco. Software Engineer, ATSistemas/Peugeot, Madrid Jan 2010 - Aug 2010 My job was to design and implement a range of business services related to how quality management is performed at their factories. The project involved drafting a quality report indicating weak points and strong points of the architecture. Technology used - Spring framework, namely SpringJDBC for the persistence layer, j2ee services that have injected the damages. I also designed and implemented a concurrent and distributed cache adapted

to customer needs, based on the use of ConcurrentHashMap class, threads iterating over this cache and implentacion Sun's Java Message Services to let

(To perform the quality and performance report I relied on the use of the tools

Software Engineer, Alten/CECA, Madrid Jan 2009 - Mar 2009 I conducted safety audits of electronic banking software that is being implemented in the savings banks, using JMeter and JProbe to detect memory leak problems as well as performance issues

I participate in the design and development of a project to NCOI (NCOI

Opleidingen, @NCOlopleidingen), designing and developing a scalable

# get the best possible referral based on what the college knows about them.

Sep 2017 - Jan 2020

# that following this pattern, I can segregate the writes and readings in a distributed system so that the writes go to a cluster of data independent of the other cluster of data readings.

Together with the use and implementation of an architecture based on pattern to manage the distributed transactionality inherent to each of the (machine learning), my colleagues and me built this architecture to give the best possible recommendations to the students of the university. my fellow data scientists in the selection of deep learning algorithms and implementation of the different phases for classification. I am using java, spring-boot, spring-cloud technologies like Eureka, Ribbon,

An scalable event-oriented recommendation engines based on apache spark deep learning algorithms, using kafka as an event engine, mongodb as a ago, with the advice of my fellow data scientist from Stratio, I've given it a few

## https://github.com/alonsoir/awesome-recommendation-engine A proof of concept designed to detect and classify variable stars in stellar images taken by radio telescopes. This type of stars allows you to create a map to create routes in interstellar space.

A scalable orchestration-based microservice architecture in order to periodically interrogate the bitcoin quote and make it available for multiple outside requests. I used java, spring-boot, kafka, elastic-search and docker. https://github.com/alonsoir/demo-kafka-elastic

The idea is to process multiple sources of unstructured data To finally arrive at a calculation of the credit risk of the bank Santander. For this we need the use of a series of components, such as Apache Flume and Apacha Kafka for the

raw data intake in avro format in the landing zone of the data lake, then we have a series of engines in charge of the consolidation of the avro files in other format, parquet, which would then be exploited in the form of Hive tables in the

architecture, enrichment engines, user view creation engines that are also used

integration with the company that is responsible for the exploitation of

The technologies used are scala as first language, some of java, hadoop,

for a Last phase where we finally create an excel file.

cloudera, spark, kafka, flume, shell scripts.

conversion, since the solution delivered is designed to be executed generically for all delegations of the Santander bank in the world, sixteen today.

Big Data Architect, Synergic Partners, Madrid Nov 2015 - Feb 2016 My task is to design big data architectures for different clients of Telefónica and synergic partners alone.

The related technologies are Java7, apache spark, Apache Camel, Apache Impala, Hadoop, Spark, maven, postgresql and GNU/linux.

with the data provided by datos.gob.es and Facebook data. Another project related with how to get real time data on a web broser using web sockets, spring integration, rabbitmq with stomp support, html5 and jquery. The purpose of this proof of concept is to know where are the different buses of Dublin city, so that every person can see the bus in a map provided by google maps.

I have developed a some proofs of concepts related with map reduce task

consumption of Web services. After I finished developing the application, I decided to create a complete solution that allows businesses to buy products at a physical store using the smartphone's camera to read barcodes and Web services on the server. On the server side, the technologies used on the implementation were - apache CXF RESTful web services, JSON and / or XML

I built an IOS5 based application that makes heavy use of geo-location and

develop the electronic apostille. I used a framework based at the ministry's own Spring MVC, Spring WebFlow, hibernate, ajax and use of caches, specifically EHCache. Software engineer, ATSistemas/ING, Madrid Sep 2010 - Dec 2010 My job was to tune and customize Alfresco Comunity Edition in a production environment so that the client could store their web pages, could autodeploy if

Software engineer, Sadiel/SES, Merida Oct 2009 - Jan 2010 A project for the Department of Health and dependence to define a development framework that would meet the needs of all stakeholders in development teams. The project took off as mades, is based on a framework of the Junta de Andalucia. http://www.juntadeandalucia.es/xwiki/bin/view/MADEJA/ Systems Engineer, Alten/L'oreal, Madrid Mar 2009 - May 2009
